

NEHEMIAH ANDREW

Full-Stack Software Engineer | TypeScript, React/Next.js, Node.js & Python | AI & Automation
Abuja, Nigeria | nehemiahandrew78@gmail.com | github.com/NehemiahAndrew | nehemiah.is-a.dev | linkedin.com/in/nehemiah-andrew-953b6424a

PROFESSIONAL SUMMARY

Full-Stack Software Engineer and founder who builds and ships web, mobile, backend, and automation products end-to-end. Experienced with TypeScript, JavaScript, React, Next.js, Node.js, Python, FastAPI, Flutter, PostgreSQL, MongoDB, Firebase, and Supabase, with hands-on experience across application architecture, API development, data modeling, integrations, security, and deployment. Built and shipped production-oriented systems including a Google Play application, CRM integration platform, route-planning system, cybersecurity platform, and AI-powered automation tools.

Career Goal: Actively seeking full-time/part-time software engineering roles at growth-stage startups and scale-ups where I can own full-stack features end-to-end and move fast to ship product—fully remote.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, Dart, SQL, HTML/CSS

Frontend: React, Next.js, Vite, Tailwind CSS, WordPress, Elementor

Backend: Node.js, Express, Django, Django REST Framework, FastAPI, REST APIs

Mobile: Flutter, FlutterFlow, Android Studio

Databases: PostgreSQL, MongoDB, SQLite, Firebase, Supabase

Integrations & Automation: OAuth 2.0, Webhooks, n8n, API integrations, API pagination, rate limiting, workflow automation

AI & Tooling: AI-assisted development, AI content pipelines, GitHub Copilot, Claude, Cursor

Security: AES-256/GCM encryption, secure application design, cybersecurity, digital forensics, penetration-testing fundamentals

Testing & DevOps: Jest, Supertest, Git, GitHub, Gunicorn, WhiteNoise, Vercel, Render

PROFESSIONAL EXPERIENCE

Founder & Full-Stack Developer

Nehemiah Technologies — Abuja, Nigeria / Remote | 2023 – Present

- Shipped Fit4Force to Google Play, an AI-powered exam-preparation platform for Nigerian military and paramilitary aspirants, using Flutter and Android Studio.
- Delivered end-to-end full-stack products by handling application architecture, data modeling, backend APIs, frontend interfaces, integrations, and deployment.
- Engineered ReportCyber, a cybersecurity-focused crowdsourced reporting platform using Flutter, Node.js, MongoDB, AES-256 encryption, and AI-assisted evidence verification.
- Automated sales-prospecting workflows with Python, FastAPI, and n8n by integrating APIs and workflow automation for digital-transformation outreach targeting SMB markets across the US and Canada.
- Built an AI-powered Shorts Generator in Python that identifies engaging video moments, removes silent segments, generates animated captions, and exposes the workflow through a dashboard.
- Launched a Next.js 15 marketing platform for Fit4Force, integrating Firebase and structuring the application across multiple subdomains.
- Delivered client-facing web development for Dr. Gold Wellness University, implementing responsive HTML/CSS updates and structured project documentation.

- Completed a responsive WordPress theme from scratch for a Coalition Technologies developer assessment, demonstrating end-to-end frontend implementation capability.

ICT Instructor

Pillars of the Nation School — Abuja, Nigeria | 2024 – 2025

- Delivered ICT instruction across primary and secondary levels, translating technical concepts into practical lessons for students with different levels of experience.
- Streamlined examination-document preparation by compiling and formatting term examination materials and performing batch XML edits across KG–SS3 documents.

Cybersecurity SIWES Trainee

Nigeria | March 2025 – September 2025

- Built practical cybersecurity experience through structured industrial training, developing exposure to security operations, threat awareness, and secure system design.

AI Data Contributor

Appen — Remote | 2024 – 2025

- Supported AI/ML training datasets through audio transcription and annotation, producing labeled data for machine-learning workflows.
-

SELECTED ENGINEERING PROJECTS

Wix ↔ HubSpot Integration

TypeScript • Node.js • Express • React • MongoDB • OAuth 2.0 • Webhooks • Jest

- Engineered a full-stack CRM integration platform enabling bi-directional contact synchronization between Wix and HubSpot through webhook-driven workflows.
- Prevented synchronization loops and duplicate writes using source tracking, correlation IDs, deduplication windows, and property-hash idempotency.
- Secured OAuth credentials with AES-256-GCM encryption, automatic token refresh, least-privilege scopes, and server-side token isolation.
- Built configurable field-mapping and lead-capture workflows with UTM attribution, audit logging, retry handling, and REST APIs.
- Implemented automated testing with Jest and Supertest across authentication, synchronization, idempotency, encryption, and integration workflows.

RouteLog Pro

Django • Django REST Framework • Python • React • Vite • Tailwind CSS • Leaflet • OSRM

- Engineered a full-stack route-planning and compliance platform combining Django REST APIs with a React/Vite frontend and interactive Leaflet mapping.
- Built a 750+ line route-calculation engine that applies FMCSA Hours of Service constraints to generate driving schedules and rest stops.
- Implemented automated ELD log generation using HTML Canvas to visualize daily driver duty-status records.
- Integrated real-road routing through OSRM with interactive route visualization, pickup/drop-off locations, fuel stops, and compliance timelines.
- Designed production deployment architecture using Unicorn/WhiteNoise for the Django backend and Vercel for the React frontend.

Fit4Force

Flutter • Supabase • Android Studio • Next.js • Firebase

- Shipped a live AI-powered exam-preparation application to Google Play targeting Nigerian military and paramilitary aspirants.
- Built the mobile product end-to-end, combining application development, backend integration, product features, and production deployment.
- Developed a supporting Next.js marketing platform integrated with Firebase and structured across multiple subdomains.

ReportCyber

Flutter • Node.js • MongoDB • AES-256 • AI

- Engineered a crowdsourced cybercrime-reporting platform combining a Flutter mobile application with a Node.js/MongoDB backend.
- Implemented encrypted data handling and AI-assisted evidence verification to support security-focused reporting workflows.
- Developed the platform as a final-year cybersecurity capstone, combining software engineering with practical security principles.

AI Shorts Generator

Python • AI • Automation • Dashboard

- Automated short-form video editing workflows by detecting engaging moments, removing silent segments, and generating animated captions.
- Connected the processing workflow to a dashboard interface, turning the underlying Python tooling into a usable application workflow.

EDUCATION

Bachelor of Science — Cybersecurity

Bingham University, Nigeria

Final-Year Project: ReportCyber — Crowdsourced Cybercrime-Reporting Platform

CERTIFICATIONS & TRAINING

- Certified Ethical Hacker (CEH)
 - Digital Forensics Certification
 - Cybersecurity Industrial Training (SIWES) — March to September 2025
-

LEADERSHIP

Band Master 1 — Boys' Brigade / Student Fellowship Organization

- Leads and coordinates band activities and events.
- Organized and coordinated group activities and events.
