

NEHEMIAH ANDREW

Full-Stack Developer | Flutter & Python | AI & Automation | Cybersecurity
nehemiahandrew78@gmail.com | [linkedin.com/in/nehemiah-andrew](https://www.linkedin.com/in/nehemiah-andrew) | github.com/nehemiah-andrew

PROFESSIONAL SUMMARY

Versatile Full-Stack Developer blending Flutter mobile engineering, Python scripting, and AI integration to ship production-ready, intelligent applications. I build AI-powered mobile apps, real-time automation pipelines, and smart tooling — combining clean architecture with a security-first mindset honed through hands-on penetration testing and ethical hacking. Currently deep into LLM integrations, Telegram bot automation, and AI-native mobile experiences. Open to remote collaborations on ambitious products at the intersection of Flutter, Python, AI, and cybersecurity.

WORK EXPERIENCE

Full-Stack & Mobile App Developer — Nehemiah Technologies 2023 – Present
· Freelance

- Built and shipped 6+ cross-platform Flutter apps (iOS/Android/Web) for startups, integrating AI features, Firebase backends, REST APIs, and third-party services end-to-end.
- Developed AI-powered features in Flutter apps including LLM-driven quiz engines, AI career advisors, and virtual interview simulators — leveraging REST API integrations with AI providers.
- Built and deployed a Telegram bot AI assistant (OpenClaw) using Groq's LLM API (llama-3.3-70b-versatile), automating intelligent responses and workflows via Python.
- Automated real-time data pipelines and smart task automation using Python, enabling clients to eliminate repetitive processes and reduce operational overhead.
- Architected Firebase Auth, Firestore, and Cloud Functions backends — reducing infrastructure costs for clients by an average of 30% while maintaining real-time sync and scalability.
- Designed and automated CI/CD pipelines (GitHub Actions + Codemagic), cutting release cycles from multi-day manual processes to same-day automated Play Store deployments.
- Translated Figma designs into pixel-perfect, fully responsive Material Design 3 UIs across Flutter mobile, tablet, and web targets.

Cybersecurity Intern — Revenue Mobilization & Fiscal Commission · Abuja Mar 2025 – Aug 2025

- Applied secure coding practices directly to mobile and web projects — identifying and mitigating 3 data-exposure risks in production apps.
- Conducted penetration testing and vulnerability assessments using Kali Linux, Metasploit, Wireshark, and Nmap — documenting 15+ critical findings presented to senior management.
- Contributed to incident response workflows, improving detection-to-response time by 25% through process documentation and automation of repetitive security checks.

FEATURED PROJECTS

Fit4Force — AI-Powered Military Prep App — Flutter · 2025
Firebase · Riverpod · LLM APIs

- Built a full cross-platform Flutter app for military aspirants featuring an AI-driven adaptive quiz engine, fitness tracker, real-time recruitment alerts, and AI career path advisor.
- Implemented a freemium model with premium AI features: virtual interview simulator, mentorship community, and personalized training plans — targeting 10,000+ users.
- Integrated Riverpod state management, REST APIs, Firebase Firestore for real-time sync, and push notifications across Android, iOS, and Web targets.

OpenClaw Telegram Bot — AI Automation — Python · Groq2025

API · LLM (llama-3.3-70b) · Telegram Bot API

- Engineered an AI-powered Telegram bot using Python and Groq's free LLM tier, enabling intelligent automated responses and real-time conversational workflows.
- Overcame API access, configuration, and rate-limiting challenges to deliver a fully functional, cost-effective LLM automation pipeline on free-tier infrastructure.

FridgeFixer — On-Demand Repair Marketplace — Flutter ·2024

Firebase ·

- Developed a mobile-first Flutter app connecting users with verified technicians, featuring real-time booking, in-app chat, location services, ratings system, and push notifications.
- Shipped securely to Android via Play Store with Firebase Auth backend and real-time Firestore status updates.

Suimerce — Multi-Vendor E-Commerce Platform — Flutter ·2024

Firebase · Payment APIs

- Designed and launched a multi-vendor platform supporting vendor registration, product management, secure payment processing, and automated vendor dashboard reporting.
- Integrated third-party payment gateway APIs and optimized Firestore queries for fast product search and filter performance across a dynamic product catalog.

TECHNICAL SKILLS

AI & Automation:	LLM API Integration (Groq, OpenAI-compatible), Telegram Bot Development, Python Automation, Real-time Data Pipelines, Web Scraping, Smart Tooling
Mobile / Flutter:	Flutter, Dart, iOS, Android, Flutter Web — cross-platform production apps
State Mgmt:	Riverpod, Provider, Bloc/Cubit, GetX
Backend & APIs:	Firebase (Auth, Firestore, Cloud Functions, Push Notifications), Supabase, SQLite, REST APIs
Python:	Python scripting, automation bots, data pipelines, API integrations, CLI tools
DevOps:	GitHub Actions, Codemagic CI/CD, Git, Play Store & App Store Deployment
UI/UX:	Material Design 3, Responsive UI, Figma-to-Flutter, Custom Animations
Cybersecurity:	Penetration Testing, Vulnerability Assessment, Ethical Hacking, Kali Linux, Metasploit, Wireshark, Nmap, Secure Coding
Other:	JavaScript, HTML/CSS, Linux, WordPress/Elementor

EDUCATION

B.Sc. Cybersecurity — Bingham University, KaruOct 2022 – Aug 2026

- Relevant Coursework: Mobile Application Development, Network Security, Cryptography, IoT Security, Digital Forensics, Systems Programming.
- Final-Year Project: IoT Security Lab — simulated penetration testing of IoT devices, documented 15+ vulnerabilities, proposed network hardening strategies.

CERTIFICATIONS

Flutter & Dart — The Complete Guide · Udemy	2024
Networking Security Fundamentals · Cisco Networking Academy	2025
Introduction to Digital Forensics · Bingham University	2024
Cybersecurity Professional Certificate · Bingham University	2026 (Expected)
CompTIA Security+ · In Progress	2025

KEY ACHIEVEMENTS

- Shipped 6+ production Flutter apps — 100% positive client feedback, 70% client retention rate.
- Reduced backend infrastructure costs for clients by 30% on average through optimized Firebase architecture.
- Built and deployed a working LLM-powered Telegram bot automation system using free-tier AI infrastructure.
- Cut CI/CD release cycles from multi-day manual processes to same-day automated deployments via GitHub Actions + Codemagic.
- Identified and documented 15+ critical vulnerabilities during security internship — findings presented to senior management.
